Introduction

PCL-726, and PCL-728 are analog output cards with 12-bit analog output channels. You can individually configure each channel to any of the following ranges: $0 \sim 5$ V, $0 \sim 10$ V, ± 5 V, ± 10 V and $4 \sim 20$ mA current loop (sink). Designed for use in industrial environments, these cards are ideal, economical solutions for applications that require multiple analog outputs or current loops.
