Introduction

The SKY-8260SV2 is designed and optimized to meet the high availability and for business-critical use cases. It is equipped with AMD EPYC™ 7003/7002 Series Processor, which not only upgrades the total core counts per each consumed power watt, but also provides a high performance and highly reliable platform for network edge and virtualization applications.

In the compute-intensive cloud or edge-computing use cases, increasing network performance, agility, and faster provisioning of applications and resources are essential. By pairing with multiple Network Interface Cards or Acceleration Cards (e.g. FPGA or GPU card), SKY-8260SV2 offers a stable carrier-grade service of network and computing acceleration. Powered by AMD EPYC 7002/7003 processor and the highly flexible PCIe and I/O expansion capability, SKY-8260SV2 can also be applied in enterprise private network infrastructure, science calculation, and specific mission-critical application platform.

SKY-8260SV2 is also designed to accommodate a wider range of temperature, dust, and humidity in order to deal with the application system running in any harsh environmental conditions. Redundant and field-replaceable PSU, Fan modules, and Management firmware minimize costly downtime, service interruptions, and onsite interventions.
